Call 117

Do not touch sick person or their personal items.
Treatment

Quick medical care helps the patient and can stop Ebola from spreading.
First Visit

A health worker visits and tells the patient’s family how to look for signs of Ebola every day for 21 days.
Wider Investigation

A health worker talks to others in the community who had direct contact with the patient and tells them how to look for signs of Ebola every day for 21 days.
Cooperation Saves Lives

Even one missed contact can keep Ebola going.
Follow-up Health Checks

Report any symptoms of Ebola to the health worker every day for 21 days.
21-Day Investigation of Ebola Patient’s Direct Contacts in Sierra Leone

If a person develops symptoms, a new 21-day investigation begins.

Repeat steps 1-6

If any contacts develop Ebola symptoms, new 21-day investigations of their contacts begin.

U.S. Centers for Disease Control and Prevention www.cdc.gov/Ebola
Investigation Complete

If no contacts develop symptoms and no new Ebola patients are confirmed, investigation is complete and *Ebola is stopped.*
